

A NOTE ON MICROSOFT VISTA (Lyricist)

Dear Customer:

If you are using MS Vista, Lyricist will not install or work properly unless you perform the following procedure:

If you are working off the download version, Right Click Properties on the install package you downloaded to your harddrive (probably desktop). The file is titled LY3000.EXE. On the compatibility tab select the box that says XP SP2 and the box that says Run as administrator. Exit and Re-install Lyricist. If you are installing off the CD, navigate to the setup.exe file and do the same as above.

You should also set the compatibility mode (see above) on the Lyricist.exe file after installation. The Lyricist.exe file is located in the C:\Program Files\Virtual studio Systems\Lyricist.

Run Lyricist. You should be all set. Enjoy!

You should be all set.
